EDUCATION

Kennesaw State University | Marietta, GA

August 2021 - December 2025

Bachelors of Science in Computer Science with Concentration in Cybersecurity

- Relevant Coursework: Data Structures, Computer Organization & Architecture, Operating Systems, Algorithm Analysis, Computer Networks, Cryptography, Object- Oriented Programming, Cloud Software Development, Parallel and Distributed Computing

Professional Organizations: National Society of Black Engineers (Member), Africans Students Association (Member)

Extracurriculars: Participant of Peach Hackathon and KSU Hackathon

TECHNICAL SKILLS

Languages: Python, Java, C++, SQL, JavaScript, HTML, CSS, Powershell

Frameworks/Libraries: Matplotlib, NumPy, Express.js, React, MySQL, JavaFX, Sockets

Tools: Github, Visual Studios, IntelliJ, Linux, PyCharm, WebStorm, VS Code, Oracle VisualBox, Ubuntu, VMware, AWS

Methodologies: Agile, Test-Driven Development, CI/CD

PROJECTS

Personal Portfolio Website

Undergraduate Student

Spring 2026

- Developed a responsive personal portfolio website using HTML, CSS, and Javascript to showcase technical projects, skills, and professional experience
- Designed and implemented interactive navigation, custom layouts, and a mobile-friendly interface to improve usability and accessibility.
- Integrated project demonstrations, downloadable resume functionality, and organized sections for education, experience, and technical skills using front-end development practices

KSU - Linux Anomaly Detection System (in Github)

Undergraduate Student

Fall 2025

- Engineered a real-time Linux log monitoring system that detects anomalous behavior and generates actionable security alerts, reducing manual log review and improving incident response readiness.
- Built an anomaly detection module trained on curated datasets to identify suspicious behavior such as excessive sudo usage, repeated failed login attempts and abnormal access times within a Linux environment with a curated website that is hosted on AWS EC2.
- Developed a real time alerting system that validates model output and generates specific actionable security alerts with testing performed via simulated log events and system logger commands.

KSU - End to End Encrypted Messaging Application (in Github)

Undergraduate Student

Spring 2025

- Built a secure, peer-to-peer messaging app with support for text, image, and voice messages over a local network.
- Developed a user-friendly JavaFX interface for intuitive message sending, with future media message support. It also implemented AES encryption to ensure confidentiality and used the CIA triad (Confidentiality, Integrity, Availability) as a baseline for security features.
- Implemented the voice messaging feature using Java Sockets and AES encryption, ensuring secure media transmission across clients.

KSU - Efficiency of String Algorithms (in Github)

Undergraduate Student

Fall 2024

- Collaborated on testing the efficiencies when it came to 3 different string matching algorithms. (KMP, Rabin-Karp, and Boyer-Moore)
- Developed Java programs to test preprocessing time, pattern frequency, and asymptotic behavior using real-world text datasets ,performance metrics and runtime graphs to compare algorithms across large-scale data (2.5M–500M characters).
- Concluded KMP had fastest average performance due to linear preprocessing, while Boyer-Moore excelled in skipping unmatched sections via heuristics

JOB EXPERIENCE

Home Depot– Hiram, GA

Sales Associate

September 2021 – Current

- Delivered knowledgeable and customer-focused service, assisting over 50+ customers daily in finding tools, hardware, and home improvement products.
- Collaborated with team members to troubleshoot customer issues and resolve product inquiries, demonstrating strong problem-solving and communication skills.
- Took initiative to learn internal inventory systems and digital tools, building a foundation for transitioning into tech and software-focused roles.
